Overview

The Stata code in this replication package reproduces all results contained in the main body and online appendix of the paper. The main text contains 11 figures and 6 tables. The online appendix contains 10 figures and 30 tables. The replicator should expect the code to run for about one hour.

Data Availability and Provenance Statements

This paper uses the following main data sources:

1) Hate crime data by the FBI's Uniform Crime Reporting (UCR) are publicly available here.

2) County-level measure of Twitter usage based on almost 500 million tweets collected by Kinder-Kurlanda et al. (2017) and available in the Gesis Datatorium (available with a free registered account).

3) Hand-collected Twitter data (Twitter, 2019) which were obtained through the Twitter API. In accordance with Twitter's terms of service, we cannot share the data listed below. If these data are needed for a specific replication purpose, the authors can be contacted to discuss access modalities.

    a. Information on SXSW Twitter followers and tweets about the SXSW.

    b. Information on the followers and tweets of other festivals in the US.

    c. Information on the Twitter followers of @RealDonaldTrump and their tweets.

    d. Information on tweets containing the hashtags #StopIslam and #Banislam.

    e. Wherever possible, we have provided the tweet IDs such that it is possible to rehydrate the Twitter data using the Twitter API. For an introduction to the rehydration of Tweets, see for example: Towards Data Science.

4) Data on the universe of Donald Trump's tweets from the Trump Twitter Archive are publicly available here.

5) Information on Trump's golf activity from his inauguration in early 2017 until the end of that year from Trumpgolfcount.com, the NYT available here, as well as the presidential schedule available from factba.se. All data are publicly available.

6) TV News Mentions of Muslims on MSNBC, FOX and CNN were obtained from the Internet Archive available here, which is publicly accessible.

7) Google search data on terms related to Muslim and Islam were obtained from Google Trends, which is publicly accessible.

8) Terror attack in the US and Europe were obtained from the Global Terrorism Database, which is publicly accessible.

9) Data from the National Crime Victimization Survey can be downloaded from the US Census and is publicly accessible.

10) Data on hate crimes directly obtained from the Anti-Defamation League (2019) via personal contact. These data cannot be shared due to a non-disclosure agreement. If needed for a full replication of the findings, they are available from the authors upon request.

11) Additional control variables:

    a. Demographic controls contain the share of people in the age buckets 20-24, 25-29, 30-34, 40-44, 45-49 and 50+, and the percentage change in population between 2000 and 2016. The data were obtained from the US Census, which is publicly accessible.

    b. Geographical controls contain the distance to Austin Texas, population density, and the logarithm of the land area for each county. The data were obtained from the US Census and calculated based on the Tiger/Line Shape File; these data are publicly available.

    c. Race and religion controls contain the population shares of Muslims, Whites, Blacks, Native Americans, Asians, and His- panics. These publicly accessible data were obtained from the US Census and the Religious Census.

    d. Socioeconomic controls contain the share of people over 25 with at least a high school degree and the share of people over 25 with at least a graduate degree, a county's poverty rate, unemployment rate, GINI coefficient, share of uninsured, log of median household income, and the share of the population employed in agriculture, manufacturing, accommodation/retail, utilities, information technologies services, and other industries. The data were obtained from the US Census and the Bureau of Labor Statistics (publicly accessible).

    e. Media controls contains the ratio of prime-time TV viewership to population, cable spending to population, and the share of Fox News viewership. The data were obtained from Simply Analytics. Due to copyright reason, these data cannot be made publicly available but are available from Simply Analytics directly with a valid subscription.

    f. Election control is the vote share of the Republican party in the 2012 presidential election. The data were obtained from the MIT Election Lab, which is publicly accessible.

    g. Crime controls contain the number of violent crime per capita as well as the number of property crimes per capita based on FBI's Uniform Crime Reporting (UCR) data, which are publicly available.

h. Data on the number of hate groups identified by the Southern Poverty Law Center (SPLC, 2019).

Statement about Rights

- ☒ I certify that the author(s) of the manuscript have legitimate access to and permission to use the data used in this manuscript.
- ☒ I certify that the author(s) of the manuscript have documented permission to redistribute/publish the data contained within this replication package. Appropriate permission are documented in the LICENSE.txt file.

License for Data

The data are licensed under a Creative Commons/CC-BY-NC license.

Summary of Availability

- ☐ All data **are** publicly available.
- ☒ Some data **cannot be made** publicly available.
- ☐ **No data can be made** publicly available.

Summary of Availability

Code for data cleaning and analysis is provided as part of the replication package. It is available at https://www.openicpsr.org/openicpsr/workspace?goToPath=/openicpsr/158541&goToLevel=project.

Some data points cannot be made publicly available for copyright reasons.

Intermediate dataset list

The following data provides an overview of the intermediate datasets used in the analysis. For a mapping of the data sources referenced in this file and the manuscript to the raw data files, please see the "Overview Raw Data.xlsx" file attached to the replication package.

Data file	Source	Notes	Provided
`Data/cross_section_trump_twitter.dta`	All listed	Combines multiple data sources	Yes
`Data/trump_time_series_daily.dta`	All listed	Combines multiple data sources	Yes

Data/panel_final_trump_twitter.dta	All listed	Combines multiple data sources	Yes
Data/panel_final_trump_twitter_daily.dta	All listed	Combines multiple data sources	Yes
Temp Data/cross_section_trump_twitter_map.dta	1,2,3	Combines multiple data sources	Yes
Temp Data/data_maps.dta	1,2,3	Combines multiple data sources	Yes
Temp Data/dataset_twitter_adoption_gesis.dta	2	Based on user profiles	Yes
Temp Data/festivals_all.dta	3	Combines data on multiple festivals	Yes
Raw Data\National Crime Vicitimization Survey\DS0003\37322-0003-Data.dta	9	United States. Bureau of Justice Statistics. National Crime Victimization Survey, Concatenated File, [United States], 1992-2018. Inter-university Consortium for Political and Social Research [distributor], 2020-03-05. https://doi.org/10.3886/ICPSR37322.v1	Yes
Temp Data/tweets_all_SXSW_Jan_Jun_2007.dta	2a		Yes
Temp Data/us_county_coordinate_data_alt.dta	11b		Yes

Tables

The following table lists all tables and where they are produced in the code.

Table	Program	Line number
Table 1	06_analyze_cross_section_trump_twitter.do	241
Table 2	06_analyze_cross_section_trump_twitter.do	238, 244, 246
Table 3	06_analyze_cross_section_trump_twitter.do	828, 830, 832
Table 4	06_analyze_cross_section_trump_twitter.do	1032, 1285
Table 5	07_analyze_time_series_trump_twitter_daily.do	466, 468, 470, 472
Table 6	07_analyze_time_series_trump_twitter_daily.do	497, 499, 501
Table 7	09_analyze_panel_trump_twitter_daily_clean.do	116
Table A1	06_analyze_cross_section_trump_twitter.do	67, 70
Table A2	07_analyze_time_series_trump_twitter_daily.do	298
Table A10	07_analyze_time_series_trump_twitter_daily.do	104
Table A12	06_analyze_cross_section_trump_twitter.do	1415, 1417, 1419
Table A13	06_analyze_cross_section_trump_twitter.do	1379, 1381, 1383
Table A14	06_analyze_cross_section_trump_twitter.do	742, 744, 746
Table A15	06_analyze_cross_section_trump_twitter.do	158
Table A18	06_analyze_cross_section_trump_twitter.do	17
Table A19	06_analyze_cross_section_trump_twitter.do	788, 790, 792
Table A20	08_analyze_panel_trump_clean.do	226
Table A21	06_analyze_cross_section_trump_twitter.do	1337, 1341
Table A22	06_analyze_cross_section_trump_twitter.do	366, 368, 370
Table A23	06_analyze_cross_section_trump_twitter.do	544, 546, 548
Table A24	06_analyze_cross_section_trump_twitter.do	656, 658, 660
Table A25	07_analyze_time_series_trump_twitter_daily.do	630, 632, 634, 636
Table A26	07_analyze_time_series_trump_twitter_daily.do	773
Table A27	07_analyze_time_series_trump_twitter_daily.do	570, 572, 574
Table A28	07_analyze_time_series_trump_twitter_daily.do	665, 667, 669
Table A29	07_analyze_time_series_trump_twitter_daily.do	696, 698, 700
Table A30	09_analyze_panel_trump_twitter_daily_clean.do	144

Figures

The following table lists all figures and where they are produced in the code.

Figure	Program	Line number
Figure 1a	15_produce_maps.do	70
Figure 1b	15_produce_maps.do	77
Figure 2	03_generate_time_series_trump_twitter_daily_clean.do	821
Figure 3	07_analyze_time_series_trump_twitter_daily.do	84
Figure 4	08_analyze_panel_trump_clean.do	92
Figure 5a	12_produce_SXSW_trend_break_graph.do	70
Figure 5b	11_produce_bar_graph_other_festivals.do	79
Figure 5c	08_analyze_panel_trump_clean.do	388
Figure 5d	13_produce_SXSW_trend_break_graph.do	281
Figure 5e	13_produce_SXSW_trend_break_graph.do	225
Figure 5f	13_produce_SXSW_trend_break_graph.do	111
Figure 6	08_analyze_panel_trump_clean.do	296
Figure 7	08_analyze_panel_trump_clean.do	177
Figure 8	07_analyze_time_series_trump_twitter_daily.do	152
Figure 9	07_analyze_time_series_trump_twitter_daily.do	112
Figure 10a	07_analyze_time_series_trump_twitter_daily.do	310
Figure 10b	07_analyze_time_series_trump_twitter_daily.do	305
Figure 10c	07_analyze_time_series_trump_twitter_daily.do	315
Figure 11a	07_analyze_time_series_trump_twitter_daily.do	328
Figure 11b	07_analyze_time_series_trump_twitter_daily.do	324
Figure 11c	03_generate_time_series_trump_twitter_daily_clean	501
Figure A1	07_analyze_time_series_trump_twitter_daily.do	84
Figure A2	06_analyze_cross_section_trump_twitter.do	62
Figure A3	02_generate_cross_section_trump_twitter_clean.do	289
Figure A4	15_produce_maps.do	90
Figure A5	10_analyze_NCVS.do	72
Figure A6a	14_produce_bar_graphs_tweet_composition_golf	78
Figure A6b	14_produce_bar_graphs_tweet_composition_golf	115
Figure A6c	14_produce_bar_graphs_tweet_composition_golf	115

Figure A7c	14_produce_bar_graphs_tweet_composition_golf	37
Figure A8	07_analyze_time_series_trump_twitter_daily.do	707
Figure A9	07_analyze_time_series_trump_twitter_daily.do	711
Figure A10	09_analyze_panel_trump_twitter_daily_clean.do	65

Computational requirements

Software Requirements

- Stata (code was last run with version 15)
  - `erepost` (as of 2021-12-31)
  - `reghdfe` (as of 2021-12-31)
  - `boottest` (as of 2021-12-31)
  - `weakivtest` (as of 2021-12-31)
  - `grstyle` (as of 2021-12-31)
  - `missings` (as of 2021-12-31)
  - `ppmlhdfe` (as of 2021-12-31)
  - `palettes` (as of 2022-04-21)
  - `colrspace` (as of 2022-04-21)
  - `gtools` (as of 2019-04-03)
  - `geodist` (as of 2019-06-24)
  - `binscatter` (as of 2013-11-24)
  - `rivtest` (as of 2022-03-26)
  - `estout` (as of 2022-03-26)
  - `ivreghdfe` (as of 2018-09-15)
  - `ivreg2` (as of 2022-05-10)
  - `ranktest` (as of 2022-09-29)
  - `ftools` (as of 2019-11-18)
  - `twostepweakiv` (as of 2019-01-12)
  - `acreg` (as of 2020-12-20)
  - `shp2dta` (as of 2015-07-17)
  - `spmap` (as of 2018-01-18)
  - `mif2dta` (as of 2008-03-14)
  - `coefplot` (as of 2022-04-21)

- `avar` (as of 2015-07-30)
- `moremata` (as of 2022-02-19)
- rivtest (net install st0171_1.pkg, not dated)
- the program "`00_Setup.do`" will install all dependencies locally

Summary

Approximate time needed to reproduce the analyses on a standard 2021 desktop machine:

- ☐ <10 minutes
- ☐ 10-60 minutes
- ☒ 1-8 hours
- ☐ 8-24 hours
- ☐ 1-3 days
- ☐ 3-14 days
- ☐ > 14 days
- ☐ Not feasible to run on a desktop machine, as described below.

Details

The code was last run on a 18-core Windows Workstation with 256 GB of RAM, 8 TB of fast local storage. Computation took approximately 1 hour.

Description of programs/code

- `/Do Files/01_Master_Do_File.do`
  - This .do file installs all required Stata packages, sets the main path for the reproduction, and executes all other .do-files used in the analysis.
- `/Do Files/02_generate_cross_section_trump_twitter_clean.do`
  - This .do file constructs a county-level dataset from the raw data that serves as input for all cross-sectional analyses.
- `/Do Files/03_generate_time_series_trump_twitter_clean.do`

  - This .do file constructs a daily time series dataset from the raw data that serves as input for all time series analyses.

- `/Do Files/04_generate_panel_trump_twitter_clean.do`
  - This .do file constructs a yearly panel dataset that serves as input for the main panel analyses.
- `/Do Files/05_generate_panel_trump_twitter_daily_clean.do`
  - This .do file constructs a daily panel dataset that serves as input for the the daily panel regression analyses.
- `/Do Files/06_analyze_cross_section_trump_twitter.do`
  - This .do file conducts all county-level analyses in the cross-section on the connection between Twitter exposure and changes in hate crime.
- `/Do Files/07_analyze_time_series_trump_twitter_daily.do`
  - This .do file conducts the daily time series analysis regarding the impact of Trump's tweets on hate crime.
- `/Do Files/08_analyze_panel_trump_clean.do`
  - This .do file produces the event studies for the yearly trends in hate crime and the weekly event study for the twitter activity around the SXSW festival.
- `/Do Files/09_analyze_panel_trump_twitter_daily_clean.do`
  - This .do file conducts the daily panel analysis on the changes of hate crime in counties with high Twitter usage on the days around Trump tweets.
- `/Do Files/10_analyze_NCVS.do`
  - This do file produces a figure on changes in reporting of hate crime based on the National Crime Victimization Survey.
- `/Do Files/11_produce_bar_graph_other_festivals.do`
  - This .do file produces a figure comparing the Twitter activity of the 2007 SXW festival in comparison to other festivals in the same year.
- `/Do Files/12_produce_SXSW_trend_break_graph.do`
  - This .do file produces Figure 5a on the change in Twitter activity around the 2007 SXSW festival.
- `/Do Files/13_analyze_twitter_adoption_sxsw.do`

  - This .do file provides additional evidence for the impact of the 2007 SXSW festival on Twitter adoption.

- `/Do Files/14_produce_bar_graphs_tweet_composition_golf.do`
  - This .do file produces figures on the changes in the composition of tweets on Trump's golf days.

- `/Do Files/15_produce_maps.do`
  - This file produces the maps in the paper.

Instructions to Replicators

- Edit `/Do Files/01_Master_Do_File.do` to adjust the default file path
- Run `/Do Files/01_Master_Do_File.do` to produce all results

List of tables and programs

The provided code reproduces:

- ☒ All numbers provided in text in the paper
- ☒ All tables and figures in the paper
